↓
Do we even need ML for this use case?

from the given data we need to divide/classify the rows into NY/SF houses

If any house has

$$\begin{cases} F_2 \geq 100 \rightarrow NY \\ F_2 < 100 \rightarrow SF \end{cases}$$

1, 2, 3 dimension

1-D Bonding \rightarrow $F_2 \geq 100 \rightarrow NY (100\%)$

2-D Bonding \rightarrow $F_2 \geq 100 \text{ \& } F_1 \geq 50 \rightarrow NY (100\%)$

3-D Bonding \rightarrow $F_1 \geq 50, F_2 \geq 10, F_3 < 10 \rightarrow NY (100\%)$
